ABOUT ME

Full Stack Developer with experience in building web applications, from front-end to back-end. Interested in Computer Science and problem solving, real-world problems using modern technologies. Practice programming languages JavaScript (React, Node.js, Next.js), as well as Java and Go. Comfortable working in a team, with a constant desire to learn and improve.

EDUCATION

Apr 2024 - present

Talent at Zone01 Oujda

zone01oujda

EXPERIENCES

2026 - 2 mouths

Backend Developer Intern at HPS

Payments & card-network acquiring platform. Migrating PL/SQL stored procedures (Diners Club) into Java / Spring Boot microservices.

- Built Kafka consumers, JPA/Hibernate entities, MapStruct mappers and Liquibase changelogs; wrote Spock unit tests.
- Tools: Java, Spring Boot, Kafka, PostgreSQL, Spock.

TECHNICAL SKILLS

- **Front-End:** JavaScript (ES6+), React.js, Angular, Nextjs, HTML5, CSS3, Angular Material
- **Back-End:** Java, Spring Boot, PL/SQL, JPA/Hibernate, Microservices, Golang, Nodejs, Rust
- **Databases:** PostgreSQL, MongoDB, SQLite, Redis
- **APIs & Services:** RESTful APIs, GraphQL, WebSockets, Apache Kafka
- **DevOps & Cloud:** Docker, Liquibase, Testing (Spock, JUnit)
- **Version Control:** Git, GitHub, Gitea, Bitbucket
- **Other Tools:** Postman, Jira

SOFT SKILLS

- Ability to act
- Planning & organizational skills
- Adaptability
- Cooperation

LANGUAGE

- English
- Arabic

PROJECTS

2026

Buy-01 (E-commerce Web Application)

E-commerce platform allowing users to create accounts, manage products, buy and sell items, and upload media.

- JWT authentication, product catalog management, media uploads, microservices architecture, event-driven communication and service discovery.
- Backend: user, product and media services using reactive programming (WebFlux), an API Gateway and Kafka-driven notifications. Frontend: profile and product management UI.
- **Tools**: Spring Boot 3.x, Java 21, Angular, MongoDB, Apache Kafka, Netflix Eureka, Docker Compose, JWT, WebFlux.

Nov 2025

01Blog

Blogging platform with user management, administration panel and reports.

- Full Stack application with user authentication, content moderation, notifications, clean UI/UX (90% responsiveness) and robust security.
- **Tools**: Spring Boot, Angular, PostgreSQL, Redis, JWT, Angular Material

Mar 2025

Social Media (Web Application)

Facebook-like social network: create profiles, publish content, join groups and exchange messages.

- Managed user tracking, real-time discussions, notifications and profile privacy. Backend: chat and notifications via WebSocket. Frontend: profile display/ editing, notifications, search.
- **Tools**: Golang RESTful, Nextjs, SQLite, Docker, WebSockets, session cookies

May 2025

Bomberman-dom (Online multiplayer game)

Bomberman online multiplayer game with chat, built on a custom lightweight framework.

- Player movement, bomb placement with collision detection, responsive UI, 60 FPS (100% vanilla JS).
- **Tools**: JavaScript, Nodejs, WebSocket, HTML5, CSS3.

Jul 2025

0-shell (System Programming)

Lightweight Unix-like shell written in Rust, implementing command execution and input/output.

- Led the project; implemented error handling, project structure, and the cd and cat commands.
- **Tools**: Rust, Linux system calls, Cargo.

Dec 2025

LocalServer (Network Programming)

HTTP/1.1 server in Java handling GET, POST and DELETE for static and dynamic content via CGI scripts; event-driven with java.nio non-blocking I/O (availability target: 99.5%).

- Configuration parser (routes, error pages, body size limits, CGI), secure session and cookie management; load tested with Siege, startup config validation prevents memory and file-descriptor leaks.
- **Tools**: Java, java.nio, java.net, ProcessBuilder, JSON, Siege.
